

## **FACTORY AUTHORIZED START-UP**

When the Installer/Dealer/End User has completed installation (this includes all water piping to booster and dishwasher, operational gas connection to booster at correct pressure, correct electrical connection, and correct venting) according to the Vanguard installation manual and enclosed information, Installer/Dealer/End User will notify start-up agency and/or Vanguard to schedule start-up. Dealer/Installer/End User must allow sufficient lead time to work with service agency scheduling. Service agency will confirm proper installation and make any necessary minor adjustments to booster and dishwasher; fill out, sign and date the Start-up forms and return to Vanguard, certifying that the Start-up has been completed correctly. If the booster is being used for heating dishwasher wash and/or power rinse tanks with a hot water coil, start-up technician will also set dishwasher tank temperatures to proper set point. Technician is to call Vanguard with this information and any questions that need to be answered for proper operation of booster heater. If there are any installation problems (leaks, improper connections, incomplete installation work), service agency technician will inform Installer/Dealer/Owner (or owner's representative) and Vanguard that these need to be corrected before Start-up can be completed. If service agency corrects any incorrect installation problems, Installer/Dealer/Owner is responsible for payment to service agency for this. If start-up can not be completed because booster heater is not properly or completely installed, including operational gas or electric service; or if dishwasher is not operational, Installer/Dealer/Owner is responsible for payment to service agency for this call. Vanguard will pay agency for Start-up upon receipt of approved, completed, signed, and dated Start-up forms. Warranty will commence following certification of Start-up forms by Vanguard.

It may be good practice to pay the installer **AFTER** certification by the start-up agency that the installation has been completed according to the PowerMax<sup>TM</sup> manual, start-up sheets and **ALL** code requirements.
